

Schunk MPZ 3-Finger Centric Gripper

The general trend to an increasing miniaturization goes on. Of course we are your competent partner for these kinds of applications as well. To provide you with the best possible options we have enhanced our successful series of pneumatic Schunk MPZ 3-Finger Centric Grippers by the new sizes 16, 20 and 25. These miniaturized but still powerful gripping modules are applicable for all kinds of small part handling as it is for example given in the field of medical-technology, micro-electronic or micro-mechanic. In order to prevent your small goods from being lost while pneumatic pressure drops suddenly we have included an optional gripping force safety device. Depending on its configuration this spring based system is able to back the gripper's opening- or closing-direction up.
