

TRIBOS SVP-2D/H with scanner - add on kit

Id.-Nr.: 25005407 (add-on kit Id.: 25005597, 25005596)

Scanner device

Contact: Achim Lauterwasser

Telefon: +49-7133-103-3187

E-Mail: achim.lauterwasser@de.schunk.com

Usage

Feed in the maximum clamping pressure into clamping device during set-up of TRIBOS toolholders.

Customer benefits

- Secure input of maximum clamping pressure into clamping device
- Compact design of scanning device allows the use even in limited space
- After installation of reader no further settings required, guarantees very easy handling during tool clamping process
- QR-Code on reduction insert won't get damaged during clamping process

QR-Code

Funktion

The scanning device recognizes the QR-code on the reduction insert and feeds in the clamping pressure for the particular TRIBOS toolholder into the clamping device. When the pump is actuated, manually with the handle or automatically after pressing the activation button, the clamping pressure will built up to the maximum pressure. The risk of overpressing and deforming the toolholder during the clamping operation is excluded.
