

A photograph of four men standing in a factory or industrial setting. They are all smiling and holding various SCHUNK tools. The man on the far left is holding a large metal gripper. The man next to him is holding a pair of red and white work gloves. The man in the center is holding a circular metal component with multiple holes. The man on the far right is holding a small metal tool, possibly a drill bit. They are all wearing blue work shirts. The background shows industrial equipment and a factory floor.

# New position of serial numbers on SCHUNK grippers

Sales information

Superior Clamping and Gripping

# New position of serial numbers

Due to a new, automatized testing facility in series production (Kanban production) in Hausen, the position of the serial number is changing for certain SCHUNK grippers.

## Previously

- Engraving not visible under the SCHUNK type plate
- Numeric code with assembly week, year and assembler

## New

- Lasered code visible on the housing
- Numeric code as a consecutive number

# New position of serial numbers

## Which product series are affected?

Currently, only the series **PGN-plus** and **JGP** in size **40** to **125** are tested with the new testing facility. Further series such as PGN and PGN-plus-P will follow.

**Please note:** Some variants (e.g. SD version) will still be assembled and tested conventionally and will not get a new serial number. Therefore both types of markings can now be found on SCHUNK products.

## What changes occur because of the new serial number?

There will be **no** relevant changes for our customers except of the visibility. Internally, the individual serial number can be used to identify the ID number, the assembly date (day, month and year) and the assembler in service cases. Therefore, a more precise traceability and an explicit assignment to the ID number is realized.
