

Superior Clamping and Gripping

Product data sheet

Universal linear module Beta 120

Flexible. Modular. Compact.

Universal linear module Beta

Universal linear module with optional toothed belt or spindle drive and various guiding options

Field of application

Universal linear module with optional toothed belt drive for high acceleration and speed or spindle drive for precise positioning given high drive forces.

Advantages – Your benefits

Adaptable drive motor for versatile approach and easy integration into existing control concepts

Optional belt or spindle driven for the optimum drive for your application

Various guide options for optimal adaption to your application

Cost-effective basic version with basic functions for simple and cost-effective applications

Compact dimensions for less interfering contours

Integrated cover tape for versatility and a long tool life

Fixing via T-nuts or slot nut possible for flexibility in the integration

Sizes
Quantity: 11

Max. stroke
860 .. 7710 mm

Max. driving force
500 .. 18000 N

Repeat accuracy
 $\pm 0.03 \dots 0.08$ mm

Max. speed
0.5 .. 8 m/s

Functional description

The slide is driven by a toothed belt or a ball screw spindle and precisely guided by a (double) profiled rail guide. The cover band runs through the slide and covers the drive and guidance. The servomotor is usually connected to the

profile via the drive shaft.

- ① **Aluminum profile**
Self-supporting and robust
- ② **Profiled rail guide**
for maximum positioning accuracy and moment loads
- ③ **Covering tape made of plastic**
along the whole guidance length against coarse dirt

- ④ **Toothed belt**
Transforms the rotational movement into a linear movement
- ⑤ **Ball screw spindle**
Transforms the rotational movement into a linear movement

Detailed functional description

Toothed belt axis with right-angle-mounted motor

This illustration shows how to mount a motor at a right-angle on a toothed belt axis using an engine cone, a clutch and a transmission.

- ① Toothed belt drive
- ② Motor bell
- ③ Coupling
- ④ Gear
- ⑤ Servomotor

Synchronized toothed belt axes with connection shafts

A second toothed belt axis can be driven using a connection shaft.

- ① Toothed belt drive
- ② Connection shaft
- ③ Motor bell
- ④ Coupling
- ⑤ Gear
- ⑥ Servomotor

Spindle axis with axially mounted motor

This illustration shows how to mount a motor axially to a spindle axis using an engine cone and a coupling.

- ① Spindle axis
- ② Motor bell
- ③ Coupling
- ④ Servomotor

Spindle axis with right angular mounted motor

The motor can also be mounted at a right angle on a spindle axis using a bevel gear.

- ① Spindle axis
- ② Bevel gear
- ③ Motor bell
- ④ Coupling
- ⑤ Servomotor

Spindle axis with parallel-mounted motor

In order to save space, the motor can be mounted parallel to the spindle axis using an angle belt drive.

- ① Spindle axis
- ② Angle belt drive
- ③ Servomotor

General notes about the series

Operating principle: Choice of toothed belt or ball screw spindle drive

Drive: servomotors of different providers can be trouble-free adapted

Profile: Extruded aluminum profile with plastic cover strip

Slide: Aluminum slide with a brush seal

Scope of delivery: Assembly and operating manual with declaration of incorporation

Warranty: 24 months

Ambient conditions: The modules are mainly designed for the use in clean ambient conditions. Please note that the life time of the modules can shorten if they are used in harsh ambient conditions, and that SCHUNK cannot assume liability in such cases. Please contact us for assistance.

Max. stroke: is the maximum permissible stroke. Acceleration and braking distances or possible overrun must be taken into consideration.

Repeat accuracy: defined as the spread of the target position after 100 consecutive positioning cycles under constant conditions.

Acceleration and speed: The values specified are the maximum values of the units without loading. The actual accelerations and speeds for your application must be designed separately and can deviate from the maximum values.

Layout or control calculation: Verifying the sizing of the selected unit is necessary, since otherwise overloading can result. Please contact us for assistance.

Application example

Electrically driven 2-axis line gantry with long-stroke gripper and standardized drive technology for loading and unloading machine tools.

- ① Universal linear module Beta with toothed belt drive
- ② Pillar assembly system

- ③ Universal linear module Beta with spindle drive
- ④ Electric long-stroke gripper EGA

SCHUNK offers more ...

The following components make the product even more productive – the suitable addition for the highest functionality, flexibility, reliability, and controlled production.

Rotary module, electric

Universal rotary module

Universal gripper

Universal swivel head

Inductive proximity switch

Pillar assembly system

Drive

Room gantry

Angle belt drive

Drive controller

① For more information on these products can be found on the following product pages or at [schunk.com](https://www.schunk.com).

Options and special information

spindle supports: Spindle supports allow higher moving speeds for longer stroke lengths

Version with a driven slide: In this version, the servomotor is fastened to the slide and the profile is vertically moved.

Flexible in motor and controller selection: The electrical control is carried out via an adaptable servo drive using common standard controller like Bosch or Siemens.

Easy integration: The easy integration into the control system is ensured by the possibility of attaching a common servomotor.

Complete solutions: On request, SCHUNK can supply complete solutions including motor, gear, controller, and cables.

NEW: Version with food –compliant lubrication (H1G): on request as a solution for an easy entry into medical technology, lab automation,, pharmaceutical and food industry. The requirements of EN 1672-2:2020 are not fully met.

How to order – Toothed belt drive

① Please note that the long slide plates and the use of spindle supports (SA) reduce the maximum stroke H.

SCHUNK standard spindle supports with noise damping (SAG) reduce the maximum stroke by 10 mm for every 2 SAG.

Please note that the moment of inertia for spindle axes refers to one meter.

* The specified driving forces are maximum values for modules with toothed-belt drives at a given speed.

** The diagram shows the maximum spindle speed depending on the speed of the spindle supports (SA) and the overall length of the unit.

C-ZSS main view

The drawing shows the unit in standard design, without considering any dimensions of the options described below.

Side definition

14 Limit switch standard position

This drawing indicates the definition for the sides. This serves as the basis for all attachments.

Drive shafts in profile (rack and pinion drive)

Depending on the axis application, the seat of the drive shaft has to be defined in the order text. Particularly with axis combinations and mechanical synchronization, several drive shafts are required.

Mounting
