

Pull-Back chuck jaw

Properties and Application

- Prevent the workpiece from lifting → flat surface
- For rotative and stationary clamping
- For all interfaces and sizes
- OD clamping of raw material (ID clamping on request)

Advantages and Customers benefit

- **Flat surface** increases the accuracy
- **Repeatable zero point**
- **High stability** during the machining of the work piece due to the active pull-down action
- **Reduction of vibration** due to the contact on the flat surface
