

Hand in hand for tomorrow

Product data sheet

Universal gripper PGL-plus-P 16

Flexible. Robust. Safe.

Universal Gripper PGL-plus-P

Universal 2-finger parallel gripper with a large jaw stroke, integrated sensor system and high payload due to use of a multi-tooth guidance

Field of application

Pneumatic universal gripper for handling a wide variety of workpieces in different applications. The encapsulated and sealed design makes the gripper suitable for both clean and dirty environments.

Advantages – Your benefits

Secure, certified gripping force maintenance, GripGuard Holds the gripped workpiece safely and also ensures a permanent gripping force of min. 80% in case of pressure drop. It also ensures that no dangerous, spontaneous jaw movements can occur in the event of a pressure drop.

Integrated sensor system for precise and process-reliable monitoring of the complete gripper stroke via IO-Link

Large jaw stroke enables flexible handling of a wide range of parts

Dirt protected due to IP 64 as standard and the metal-encapsulated, additionally sealed design at the base jaws

Robust interior multi-tooth guidance for high moments and use of long gripper fingers

With food-compliant lubrication as standard as a solution for an easy entry into medical technology, lab automation, pharmaceutical and food industry. The requirements of EN 1672-2:2020 are not fully met.

Fastening on two gripper sides in four screw directions for universal and flexible gripper assembly

Air supply via hose-free direct connection or screw connections for universal and flexible gripper assembly

Sizes
Quantity: 5

Weight
0.46 .. 7.9 kg

Gripping force
145 .. 1900 N

Stroke per jaw
10 .. 25 mm

Workpiece weight
0.72 .. 7 kg

Functional description

By applying pressure to the opposing drive pistons, the multi-tooth guided base jaws are directly driven via a drive type fastening. The jaw stroke is synchronized by means of rack-and-pinion kinematics. This ensures

powerful and centric opening and closing of the gripper.

- ① **Base jaw**
with standardized screw connection diagram for the connection of the workpiece-specific gripper fingers. The centering sleeves are attached so that they cannot be lost when exchanging fingers.
- ② **Multi-tooth guidance**
Maximum service life due to lubricant pockets in the robust multi-tooth guidance, and absorption of high forces and torques by means of the large guidance support.
- ③ **driver**
Direct power transmission of the drive pistons to the gripper fingers via a robust drive type fastening.
- ④ **Kinematics**
The gear rack-and-pinion kinematics ensure synchronization of the base jaws and centric clamping.
- ⑤ **Pneumatic drive piston**
Maximum power generation through two oval pneumatic pistons.
- ⑥ **Dust cover**
The entire circumference of the gripper is encapsulated with metal and additionally sealed with a lip seal at the base jaws so that it is suitable for universal use, even in dirty environments.

Detailed functional description

Gripping force maintenance version AS/IS

Conventional gripping force maintenance via springs also ensures a minimum gripping force in case of a pressure drop. In the AS variant this acts as a closing force, and in the IS variant as an opening force. The image shows the AS variant. The gripping force maintenance can also be used to increase the gripping force or for single actuated gripping.

- ❶ Base jaw
with standardized screw connection diagram for the connection of the workpiece-specific gripper fingers. The centering sleeves are attached so that they cannot be lost when exchanging fingers.
- ❷ Multi-tooth guidance
Maximum service life due to lubricant pockets in the robust multi-tooth guidance, and absorption of high forces and torques by means of the large guidance support.
- ❸ driver
Direct power transmission of the drive pistons to the gripper fingers via a robust drive type fastening.
- ❹ Kinematics
The gear rack-and-pinion kinematics ensure synchronization of the base jaws and centric clamping.
- ❺ Pneumatic drive piston
Maximum power generation through two oval pneumatic pistons.
- ❻ Dust cover
The entire circumference of the gripper is encapsulated with metal and additionally sealed with a lip seal at the base jaws so that it is suitable for universal use, even in dirty environments.
- ❼ Gripping force maintenance by means of a pressure spring
Conventional gripping force maintenance via springs also ensures a minimum gripping force in case of a pressure drop. In the AS variant this acts as a closing force, and in the IS variant as an opening force. The image shows the AS variant. The gripping force maintenance can also be used to increase the gripping force or for single actuated gripping.

GripGuard: secure, certified gripping force maintenance version ASC/ISC

Secure GripGuard gripping force maintenance also ensures a permanent min. gripping force of 80%, even in case of a pressure drop. In the ASC variant this acts as a closing force, in the ISC variant as an opening force. Compared to conventional gripping force maintenance via springs, this GripGuard variant thereby ensures a significantly higher gripping force. In addition, the gripping force maintenance is constant over the entire jaw stroke. There is also no risk of injury with this gripper, as the base jaws do not move uncontrollably in the event of pressure drop. This simplifies the risk assessment, since gripping force maintenance is already certified as a safety function (PLd Cat. 3).

- ❶ Base jaw
- ❷ Multi-tooth guidance
- ❸ driver
- ❹ Kinematics
- ❺ Pneumatic drive piston
- ❻ Dust cover
- ❼ Pinion shaft
The one-piece pinion shaft connects the pinion of the jaw synchronization with the mechanics of safe gripping force maintenance.
- ❽ Clamping element
In the event of a pressure drop where a workpiece is not gripped, the clamping element will prevent the pinion from rotating. This prevents any potentially dangerous movements of the gripper fingers.
- ❾ Elastomer
In the event of a pressure drop while gripping the workpiece, the gripping force accumulated in the elastomer (energy storage) will retain the workpiece securely. The clamping element prevents the gripper fingers from opening in such cases.
- ❿ Spring-loaded pneumatic piston
In normal gripper operation, the pneumatic piston is always actuated with compressed air. This does not require a separate air supply. In the event of a malfunction, i.e. a sudden pressure drop, the piston is pushed back via the spring assembly and the clamping element blocks the pinion shaft so that movement of the gripper fingers is no longer possible.
- ⓫ Pressure compensating valve
The pressure compensation valve ensures any excess pressure that has accumulated inside can escape to the outside. At the same time, it prevents dirt or liquids from entering the inside from the outside.

Certified gripping force maintenance

The certificate was issued by the German Social Accident Insurance (DGUV). The DGUV test certificate confirms the secure GripGuard gripping force maintenance in case of a power failure for the gripper series PGL-plus-P in the versions ASC and ISC. The gripping systems comply with the relevant provisions of Directive 2006/42/EC (Machinery Directive). The safety function is implemented with category 3 and PLd according to EN ISO 13849-1:2015.

Integrated sensor system IOL

The gripper variant "IOL" with integrated sensor system enables precise and process-reliable monitoring of the complete gripper stroke via IO-Link. There is no longer any need for separate procurement, installation and adjustment of additional, externally mounted sensors. In addition to IO-Link standards such as temperature display and process parameters, this integrated sensor system offers two additional modes as standard that are perfectly tailored to gripping applications: Gripping Point Mode and Gripping Range Mode. Up to eight workpieces (positions or ranges) can be stored directly in the sensor profile. Tolerance and hysteresis values are already stored in the sensor profile, but can be set individually if required. However, due to the default values, this is not necessary in most cases.

In SIO mode, this gripper variant can also be used without an IO-Link master to interrogate two freely adjustable switching points. The positions "gripper open" and "gripper closed" are preset and can be individually adjusted by the customer.

External sensor system with magnetic switches

For monitoring with magnetic switches, the gripper is equipped with two sensor slots. There is a choice of different sensors: 1-point switches, 2-point switches or else compact analog sensors for mounting in the C-slot. The image shows the "gripper open" and "gripper closed" position query with two MMS 22 sensors.

External sensor system with inductive proximity switches

The "IN" gripper variant is supplied with the pre-assembled attachment kit for two inductive proximity switches. The positions "gripper open" and "gripper closed" are preset. Proximity switches must be ordered separately and are slid into the housing as far as the stop and clamped. Both sensors can be set individually to monitor any other position such as "workpiece gripped" for example. Optionally, another attachment kit for two additional inductive proximity switches can be inserted at the back of the gripper, so that a total of four sensors can be mounted.

Precision version P

With the "P" precision version of the gripper, the base jaws are reworked on the fully assembled gripper. As a result, tolerance-related deviations can be compensated and the most precise position, form and location tolerances can be achieved. This enables highly precise gripping applications or positionally accurate change of grippers without any re-alignment.

Optional mounting options for customized add-ons

On the top of the gripper, four threads and fits are available. If required, these can be used to fasten customized designs or implement additional functions. The image shows an example of a design with additional centering or support of a workpiece.

Centering and mounting options for gripper assembly

The gripper can be installed on two sides and in four screw directions. This allows universal and flexible mounting of the gripper in all conceivable arrangements.

Pneumatic connections for the power supply

The gripper can be flexibly supplied with compressed air on three sides.

- ❶ At the front via the main air connections A and B by means of air connections and pneumatic hoses. Air purge can be optionally created via S.
- ❷ At the bottom via direct connections a and b, by means of tubeless direct connection and using the O-rings supplied. The pneumatic supply is then via the adapter plate. Air purge can be optionally created via s.
- ❸ At the rear side via direct connections a and b, by means of tubeless direct connection and using the O-rings supplied. The pneumatic supply is then via the adapter plate. Air purge can be optionally created via s.

General notes about the series

Operating principle: Dual piston drive with gear rack and pinion synchronization

Housing material: Aluminum

Base jaw material: Steel

Actuation: pneumatic, with filtered compressed air as per ISO 8573-1:2010 [7:4:4].

Warranty: 36 months

Scope of delivery: Gripper in the ordered variant, accessory kit (centering sleeves, O-rings for direct connection/detailed contents see operating manual) and safety information. Product-specific instructions can be downloaded at schunk.com/downloads-manuals.

Gripping force maintenance: via certified, safe gripping force maintenance version or conventionally via the variant with springs or via SDV-P pressure maintenance valve

Gripping force: is the arithmetic sum of the individual force applied to each jaw at distance P (see illustration).

Finger length: is measured from the reference surface as the distance P in direction to the main axis.

The maximum permissible finger length applies until the nominal operating pressure is achieved. With higher pressures, the finger length must be reduced proportionally to the nominal operating pressure.

Detectable workpiece difference: specifies the smallest distinguishable difference between two gripped workpieces. The value applies at 6 bar, 23 °C, finger length at distance P and operation without air purge. Deviating parameters can influence the accuracy.

Repeat accuracy: is defined as a distribution of the end Position for 100 consecutive strokes.

Workpiece weight: is calculated for force-fit gripping with a coefficient of static friction of 0.1 and a safety factor of 2 against workpiece slippage at acceleration due to gravity g. For form-fit or capture gripping, there are significantly higher permissible workpiece weights.

Closing and opening times: are movement times of the base jaws only, without application-specific gripper fingers. Valve switching times, hose fill times, or PLC reaction times are not included, and are to be considered when cycle times are calculated.

Application example

In addition to ordinary handling processes, the robust and dirt-protected universal gripper PGL-plus-P can also be used to hold workpieces during simple machining operations. In the example shown, a workpiece is being held between the gripper fingers. A robot moves the workpiece along a stationary deburring spindle for deburring. The connected air purge prevents dirt from entering the gripper.

Options and special information

Secure gripping force maintenance ASC/ISC: The secure, certified GripGuard gripping force maintenance also ensures a min. gripping force of 80% even in case of a pressure drop. In the ASC variant this acts as a closing force, in the ISC variant as an opening force.

Gripping force maintenance version AS/IS: The conventional version for gripping force maintenance via springs also ensures a minimum gripping force in case of a pressure drop. In the AS variant this acts as a closing force, and in the IS variant as an opening force.

High-temperature version V: for use in hot environments

Precision version P: for the highest accuracy

Integrated sensor system IOL: The integrated sensor system enables precise and process-reliable monitoring of the complete gripper stroke via IO-Link.

External sensor system: Instead of the gripper version with integrated sensor system, conventional external sensors can also be used. Various magnetic switches and inductive proximity switches are available.

Additional versions: Various options can be combined with each other.

Integrated air purge connection: impedes the ingress of dirt into the inside of the gripper. In combination with air purge, this increases the protection class from IP 64 to IP 67.

Food-grade lubrication: The product contains food-compliant lubricants as standard. The requirements of EN 1672-2:2020 are not fully met. The relevant NSF certificates are available at <https://info.nsf.org/USDA/Listings.asp> using the lubricant information in the operating manual.

SCHUNK gripper PGL-plus-P

Overview Accessories

- ❶ **PGL-plus-P-IOL**
Universal 2-finger parallel gripper with a large jaw stroke, integrated sensor system and high payload due to use of a multi-tooth guidance
- ❷ **PGL-plus-P**
Universal 2-finger parallel gripper with a large jaw stroke and high payload due to use of multi-tooth guidance

Sensor system

- ❸ **AS-IN 80**
Mounting kit for inductive proximity switch
- ❹ **IN ...**
Inductive proximity switch with molded cable and straight cable outlet
- ❺ **IN ...-SA**
Inductive proximity switch with molded cable and lateral cable outlet
- ❻ **IN-C 80**
Inductive proximity switch, directly pluggable
- ❼ **MMS 22**
Magnetic switch with straight cable outlet for monitoring a position

MMS 22-PI1
Magnetic switch with straight cable outlet for monitoring a freely programmable position
- ❽ **MMS 22-PI2**
Magnetic switch with straight cable outlet for monitoring two freely programmable positions
- ❾ **MMS 22-PI1-HD**
MMS 22-PI1 in robust design

MMS 22-PI2-HD
MMS 22-PI2 in robust design
- ❿ **MMS 22-SA**
Magnetic switch with lateral cable outlet for monitoring a position

MMS 22-PI1-SA
Magnetic switch with side cable outlet for monitoring a freely programmable position

- ⓫ **MMS 22-IOL**
Magnetic switch for detecting the gripper jaw position with IO-Link communication
- ⓬ **MMS-A**
Analog magnetic switch with straight cable outlet for measuring the gripper jaw position with analog output and teach function

Finger Accessories

- ⓭ **UZB**
The universal intermediate jaw allows fast tool-free and reliable plugging and shifting of top jaws at the gripper.
- ⓮ **BSWS-BM**
Quick-change base with integrated locking mechanism for fast change of top jaws using a hexagon socket wrench
- ⓯ **BSWS-A**
Adapter pin of the jaw quick-change system for adaptation to the customized finger
- ⓰ **BSWS-B**
Quick-change base with integrated locking mechanism for fast change of top jaws using a hexagon socket wrench
- ⓱ **Customized fingers**
- ⓲ **BSWS-AR**
Adapter pin of the jaw quick-change system for fast, manual change of top jaws
- ⓳ **BSWS-ABR**
Finger blank made of aluminum with interface to the jaw quick-change system

BSWS-SBR
Finger blank made of steel with interface to the jaw quick-change system
- ⓴ **BSWS-UR**
Locking mechanism for the integration of the jaw quick-change system into customized fingers
- ⓵ **ABR/SBR**
Finger blanks made of steel or aluminum with standardized screw connection diagram
- ⓶ **ZBA**
Intermediate jaws for reorientation of the mounting surface

Hose-free direct connection M4

- ③ Adapter ④ Grippers

The direct connection is used for compressed air supply without error-prone tubing.

Gripper monitoring with inductive proximity switches IN

Electronic symbol according to DIN ISO 1219

A, a Main / direct connection, gripper opening
B, b Main / direct connection, gripper closing
The circuit symbol shows the connection options and the function of the pneumatic gripper. "A" and "B" are the main connections of the gripper for opening and closing. "a" and "b" are optional direct connections for opening and closing without interference-prone hosing. "S" and "s" describe the optional air purge connection, which impedes the ingress of dirt into the gripper.

① SCHUNK also provides ECAD data for your design. You can choose between direct access via your EPLAN-Electric P8 software or download using the EPLAN Data Portal. Further information can be found on the SCHUNK website.

SDV-P pressure maintenance valve

④ Grippers
⑨⑩ SDV-P pressure maintenance valve

The SDV-P pressure maintenance valves ensure in emergency STOP situations that the pressure in the piston chamber of pneumatic gripper, swivel, linear, and quick-change modules is temporarily maintained. The pressure maintenance valve must not be used in combination with the ASC and ISC variants.

Description	ID	Recommended hose diameter
		[mm]
Pressure maintenance valve		
SDV-P 04	0403130	6
SDV-P 07	0403131	8
Pressure maintenance valve with air bleed screw		
SDV-P 04-E	0300120	6
SDV-P 07-E	0300121	8

① In order to achieve the specified closing and opening time for each gripper variant, the recommended hose diameter must be used. The direct allocation of the respective variant of the gripper for the respective SDV-P can be found at schunk.com.

Pneumatic positioning device PPD

The PPD allows flexibility in all applications with pneumatic grippers through free positioning, gripping force and speed adjustment.

BSWS-UR 100	0302993	1

① If the operating pressure is higher than 6 bar, suitability for use beyond the application limits must be checked. Only systems that are listed in the table, can be used. In the PGL-plus-P gripper series, the use of finger blanks with jaw quick-change system results in a limitation of the closing stroke. Please check this in detail in advance using the CAD data and adjust the reworking of the fingers accordingly.

Universal gripper

The diagram illustrates the BSWS system components and their connections. At the top is a rectangular unit labeled '4'. Below it, a horizontal line branches into two vertical lines. The left vertical line connects to a box labeled 'BSWS-BM' with a circular logo, which is then connected to a box labeled 'BSWS-A' with two vertical slots. The right vertical line connects to two vertical slots, which are then connected to a box labeled 'BSWS-ABRM' with a circular logo. To the right of 'BSWS-ABRM' is a box labeled 'BSWS-URM' with a circular logo. A syringe is shown injecting into the 'BSWS-URM' box. Below the 'BSWS-A' box is a dashed outline of a component labeled '90' with two vertical slots. Below the 'BSWS-URM' box is a dashed outline of a component labeled '90' with a syringe injecting into it.

⑨0 Customized gripper fingers

ZBA-L-plus 100 intermediate jaws

- ② Finger connection
- ⑤⑥ Included in the scope of delivery
- ⑦② Fit for centering sleeves
- ⑧① Depth of the centering sleeve hole in the counter part
- ⑧① Not included in the scope of delivery

The optional ZBA-L-plus intermediate jaws allow the screw connection diagram of the top jaws to be rotated by 90°. This makes it easier to design and produce top jaws (particularly for long versions) because no deep through-bores are required.

Description	ID	Material	Finger interface	Scope of delivery
Intermediate jaw				
ZBA-L-plus 100	0311742	Aluminum	PGN-plus 100	1

UZB 100 universal intermediate jaw

- ① Gripper connection
- ② Finger connection
- ⑤④ Optional right or left connection
- ⑤⑦ Locking
- ⑦② Fit for centering sleeves
- ⑧① Depth of the centering sleeve hole in the counter part

The drawing shows the UZB universal intermediate jaw. The fully removable UZB-S slide (can also be ordered separately) allows for a quick jaw change.

PGL-plus-P 16

Universal gripper

Finger blanks ABR/SBR-PGZN-plus 100

- ② Finger connection 72 Fit for centering sleeves

The drawing shows the finger blank which can be reworked by the customer.

Description	ID	Material	Scope of delivery
Finger blank			
ABR-PGZN-plus 100	0300012	Aluminum (3.4365)	1
SBR-PGZN-plus 100	0300022	Steel (1.7131)	1

- ① When finger blanks are used, the closing stroke of individual gripper series may be limited. Please check this in detail in advance using the CAD data and adjust the reworking of the fingers accordingly.

Sensor Teaching Tool

- 90 Gripper with integrated sensor system IOL 91 Sensor Teaching Tool
92 Connection cables

If the gripper with integrated sensors (PGL-plus-P...-IOL) is operated in SIO mode without an IO-Link master, a separate magnetic teaching tool will be required.

Description	ID	
Sensor Teaching Tool		
MT-MMS 22-PI	0301030	

- ① The magnetic teaching tool and the connection cable must be ordered as optional accessories.

IN 80 inductive proximity switches

- 17 Cable outlet
 90 Sensor IN ...
 91 Sensor IN...-SA
 92 Attachment kit for monitoring with two inductive proximity switches
 93 Optional rear mounting of another attachment kit for two additional proximity switches

End position monitoring can be mounted with an attachment kit. Alternatively, the sensors can be directly mounted on the IN gripper variant.

Description	ID	Often combined
Attachment kit for proximity switch		
AS-IN80-PGL-plus-P 16	1499627	
Inductive proximity switch

- ① Two sensors are required per unit for monitoring two positions. On option, extension cables and sensor distributors are available. Additional product variants of the sensor, and further information and technical data can be found in the catalog chapter sensor system.

Programmable magnetic switch MMS 22-PI1

- 17 Cable outlet
- 91 Sensor MMS 22 ..-PI1-...-SA
- 90 Sensor MMS 22 PI1-...

Position monitoring with one programmable position per sensor and integrated electronic system in the sensor. Can be programmed using MT magnetic teaching tool (included in the scope of delivery, ID 0301030) or ST plug teaching tool (optional). End position monitoring for mounting in the C-slot. If the ST plug teaching tools are listed in the table provided, teaching is only possible with the ST teaching tools.

Programmable magnetic switch MMS 22-PI2

- 74 Limit stop for sensor
- 90 MMS 22...-PI2-... sensor

Position monitoring with two programmable positions per sensor and electronics integrated in the sensor. Can be programmed using MT magnetic teaching tool (included in the scope of delivery, ID 0301030) or ST plug teaching tool (optional). End position monitoring for mounting in the C-slot. If the ST plug teaching tools are listed in the table provided, teaching is only possible with the ST teaching tools.

MMS 22-PI2-S-M8-PNP-HD	0301130	●
MMSK 22-PI2-S-PNP-HD	0301132	

- ① One sensor is required per unit for monitoring two positions. Extension cables and sensor distributors are optionally available. Additional product variants of the sensor, and further information and technical data can be found in the catalog chapter sensor systems.

Analog position sensor MMS-A

- 74 Limit stop for sensor 90 MMS 22-A-... sensor

Non-contact measuring, analog multi-position monitoring for any number of positions, easy to assemble in the C-slot. Can be programmed using MT magnetic teaching tool (included in the scope of delivery, ID 0301030) or ST plug teaching tool (optional). End position monitoring for mounting in the C-slot. If the ST plug teaching tools are listed in the chart provided, teaching is only possible with the ST teaching tools.

Description	ID	
Analog position sensor		
MMS 22-A-10V-M08	0315825	
MMS 22-A-10V-M12	0315828	

- ① One sensor is required for each gripper. No additional mounting kit is required – the gripper is equipped for use of the sensor by default. Further information and technical data can be found in the catalog chapter sensor systems.

Flexible position sensor with MMS-A

- 74 Limit stop for sensor 91 FPS-F5 evaluation electronic
90 MMS 22-A-... sensor 92 Connection cables

Flexible position monitoring of up to five positions. Sensor can be taught using MT magnetic teaching tool (included in the scope of delivery, ID 0301030) or ST plug teaching tool (optional). If the ST plug teaching tools are listed in the table provided, teaching is only possible with the ST teaching tools.

Description	ID	
Analog position sensor

Sensor Teaching Tool		
MT-MMS 22-PI	0301030	
Connection cables		
KA BG16-L 12P-1000	0301801	

- ① When using an FPS system, one MMS 22-A-05V and one evaluation electronics (FPS-F5) are required per each gripper, as well as an attachment kit (AS), if listed. On option, cable extensions (KV) are available – see catalog chapter “Accessories.”

Programmable magnetic switch MMS-I0-Link

74 Limit stop for sensor 90 Sensor MMS 22-I0L-...

Sensor for multi-position monitoring through detection of the complete gripper stroke. The sensor is mounted directly in the C-slot of the gripper. The sensor is programmed for the gripper via the I0-Link interface, Magnet teaching tool MT (included in scope of delivery; ID 0301030) or the ST plug teaching tool (not included in scope of delivery; ID 0301026). An I0-Link master is required for operation.

Description	ID	
Programmable magnetic switch		
MMS 22-I0L-M08	0315830	
MMS 22-I0L-M12	0315835	

- ① One sensor is required for each gripper. No additional mounting kit is required – the gripper is equipped for use of the sensor by default. Further information and technical data can be found in the catalog chapter sensor systems.

Connection cables

KA G... Connection cable with straight socket

KA W... Connection cable with angular socket

⑥ Lubricating nipple connection

⑮ Sealing bolt

⑨⑩ Cable end with straight connector

⑨① Gripper with integrated sensor system IOL

⑨② Cable with straight female connector

⑨③ Cable with angled female connector

The connection cable is ideal for connecting the corresponding components to the controller or the power supply unit. The connection cable has a 4-pin M8 socket on one side and an open wire strand on the other side for individual connections. The connection cables are suitable for use both in the cable track as well as in torsion applications.

Description	ID	L1 [m]	D1 [mm]	L2 [mm]	D2 [mm]	L3 [mm]	D3	Often combined
Voltage supply/signals connection cable – drag chain and torsion resistant, M8 socket, straight

Cable with straight female connector
- 93

Cable with angled female connector

The cable extensions are ideal for connecting the relevant components to the control system, or for use as extension cables. The cable extensions have a 4-pin M8 socket with a straight or angled design on the module side and a 4-pin M12 connector with a straight design on the other side. The cable extensions are suitable for use in the drag chain and in torsion applications.
