

ROTA THW3

Sealed jaw quick-change
chuck with straight serrated
base jaw interface

Jaw quick-change chuck with patented sealing system for permanent lubrication and constantly high clamping forces

Constant clamping forces, minimal maintenance costs and increased energy efficiency – all in a power chuck with jaw quick-change system – that's exactly what the new ROTA THW3 promises. Thanks to the jaw quick-change system, the chucks are suitable for flexible production starting from batch size 1. Furthermore, the patented seal allows for use in applications with fine chips and dirty environments.

Advantages – Your benefits

- + Sealed power lathe chuck**
For significantly longer maintenance intervals
- + Permanent grease lubrication**
For consistently high clamping forces
- + Convenient jaw quick-change system**
Minimizing set-up times and costs
- + Large through-hole**
Machining all standard pipe diameters
- + High degree of efficiency of the ring piston system**
Process-reliable clamping due to high clamping forces
- + High jaw quick-change repeat accuracy**
No reboring of already machined jaws necessary
- + Modular center sleeve system**
Optimal adjustment to new clamping tasks thanks to the exchangeable center sleeves
- + Straight serrated base jaws GBK**
Compatible to ROTA THW plus, ROTA-G and system "R" (Reishauer)
- + All sides of the functional parts are hardened and ground**
Ensures a long service life

Technical data

Description	Max. rotational speed [min ⁻¹]	Max. clamping force [kN]	Max. actuating force [kN]	Stroke/jaw [mm]	Piston stroke [mm]	Through-hole [mm]
ROTA THW3 200-52	6000	64	38	6.7	17.5	52
ROTA THW3 225-66	5400	82	41	7.4	21	66

ROTA THW3 400-128	3000	240	128	8.6	25	128
ROTA THW3 500-165	2200	240	128	10.5	30	165
ROTA THW3 630-165	1700	240	128	10.5	30	165

Function of ROTA THW3

The axially movable piston transfers the force to the thrust jaws and generates a radial jaw movement synchronized with the rotational axis. The innovative sealing system located on the pusher jaws prevents grease from being rinsed out, and the clamping force from being lost gradually.

- 1 Wedge hook drive in ring piston design**
It offers high run-out accuracies even at high speeds
- 2 Hardened and extremely rigid base body**
Therefore a longer service life at highest precision.
Even with maximum clamping force
- 3 Large through-hole**
For machining of all standard raw material diameters
- 4 Patented sealing system**
For consistently high clamping forces
- 5 Mounting thread**
For workpiece stops or modular center sleeves
- 6 Jaw quick-change system**
Shortest set-up times due to individual unlocking of jaws
- 7 Locking mechanism**
The pusher jaw enables a safe base jaw position, ensuring safe engagement of the base jaw serration with the chuck body serration
- 8 Base jaws with straight serration (GBK)**
Compatible with ROTA THW plus, ROTA THW, ROTA-G and the "R" (Reishauer) system
- 9 Inlays at the mounting holes**
To increase the tightness and rigidity of the chuck
- 10 Admissible jaw locking**
The jaw change wrench can only be pulled off if the driver is properly engaged in the base jaw
- 11 Display of maximum jaw position**
To prevent incorrect operation and associated overloading of the guideways
- 12 Standard jaw interface**
For the use of standard top jaws from SCHUNK

Quick jaw change

Turning the jaw change wrench by 90° pulls the driver out of the base jaw serration. The jaw change wrench does not have to be held during the change process, allowing quick and easy replacement of the base jaw with one-hand operation. The complete jaw set can be exchanged in less than a minute.

Removal of the chuck jaws

In opened position the jaws can be adjusted or removed in seconds with the jaw change wrench.

Insertion of the chuck jaws

Simply insert the new chuck jaws into the guidance. The plunger pin pre-positions the serration. Detaching the jaw change wrench safely locks the jaw in its position.

High repeat accuracy after changing jaws

The dual-guided piston, the direct power transmission and the system consisting of the pusher jaw and integrated driver result in an extremely rigid system. This is evidenced by the extremely high repeat accuracy of the chuck.

High run-out accuracy after a jaw change

Chuck jaws only have to be turned once. The repeat accuracy of < 0.02 mm ensures permanently high concentricities on the workpiece.

Patented sealing system

A patented sealing system – consisting of a specially manufactured seal on the pusher jaws of the chuck and on the driver – prevents dirt and fine chips from entering the chuck and thus the chuck mechanism.

Advantage: The jaw quick-change chuck can now also be used for applications such as cast machining.

Consistent clamping forces

The patented sealing system also prevents grease escaping from the chuck during machining. This makes it possible to achieve unprecedented consistent clamping forces for jaw quick-change chucks. The maintenance costs for the ROTA THW3 are also significantly reduced compared to the previous version.

Patented jaw locking

The base jaw of the ROTA THW3 is locked in the chuck by a driver. Pulling the driver back into the pusher jaw releases the base jaw for the jaw change. This patented system also completely seals the release mechanism of the jaw quick-change system.

Jaws 100% compatible with ROTA THW plus and ROTA THW

The base and top jaws of the ROTA THW3 are 100% compatible with the predecessors ROTA THW plus and ROTA THW. This means that existing chucks can be exchanged for new generation chucks with little effort.

Weight optimized chuck

Weight-reducing bore holes and bevels on the chuck body achieve optimum inertia behavior. This makes it possible to achieve faster acceleration and braking operations. In addition, the accessibility of the tool to the workpiece is significantly improved.

Savings in set-up costs due to jaw quick-change chuck

The jaw quick-change system is the ideal clamping tool for clamping tasks even up from batch size 1. Ideally the set-up times can be reduced – depending on the number of jaw changes – by up to 80% in comparison to power lathe chucks with fine serration.

- ① **Set-up costs***
In EURO per year
- ② **Set-up time**
In minutes per day
- ③ **Set-up costs***
In EURO per day
- ④ **Set-up costs**
Per year without jaw quick-change
- ⑤ **Set-up costs**
Per year with jaws quick-change
- ⑥ **Savings potential**
Depending on the set-up rate

① * Set-up costs per minute 1.33 € (80 € per hour) at 260 business days

Chuck for shaft clamping drawn in open position.
Subject to technical changes.

Direct adapter plates

Direct adapter plates are used if the spindle mounting bolt circle has the same size as the lathe chuck mounting bolt circle. The adapter plate has to be mounted on to the spindle together with the lathe chuck. The adapter plate is preassembled on the lathe chuck.

Reduction adapter plates FF-T2

Reduction adapter plates are used if the mounting bolt circle of the spindle is smaller than the one of the lathe chuck mounting bolt circle. The adapter plate is first mounted on the spindle and then the lathe chuck is mounted on the adapter plate.

Expansion adapter plates FF-T3

Expansion adapter plates are used if the mounting bolt circle of the spindle is larger than the one of the lathe chuck mounting bolt circle. The adapter plate is first mounted on the spindle and then the lathe chuck is mounted on the adapter plate.
