Product data sheet

Automatic tool changers CPS 210

Modular. Robust. Flexible.

Automatic tool changers CPS

Pneumatically actuated tool changer with self-retaining function in the event of a loss of compressed air, the integrated piston spring ensures that gap formation is minimized.

Field of application

Universally applicable (e.g., for handling tasks or machine loading) with short change-over times between an end effector such as a gripper or a customer's tool.

Advantages – Your benefits

Wide range of sizes with 18 sizes, the CPS enables an optimal selection for every application

Versatile media transmission extensive range of optional modules for feed-through of electrical and fluidic media extends the application possibilities of the tool change system

Durability The use of hardened and stainless steel in all functional parts increases the bearing load capacity and extends the service life

Easy assembly Installation is quick and easy using standardized adapter plates or directly on the mechanical interface

Sizes
Quantity: 18

Functional description

The automatic tool changer CPS consists of a change master (CPS-K) and a change adapter (CPS-A). The CPS-K that is mounted on the robot couples and decouples the CPS-A which is mounted on the tool. The pneumatically

actuated locking piston ensures a reliable connection. Suitable option modules supply the coupled tool.

- ① **Housing**
Weight-optimized due to the use of high-strength, hard-coated aluminum alloy
- ② **Piston**
Pneumatically driven, ensures locking/unlocking of the system
- ③ **Locking mechanism**
Functional parts are made of hardened stainless steel. Locking balls ensure a quick and secure connection. Self-retaining during compressed air drop. Integrated spring prevents gap formation between master and adapter.
- ④ **Integrated pneumatic feed-throughs**
Minimization of the interfering contour. Also suitable for transferring vacuum.
- ⑤ **Sensor monitoring of the locking device**
Optional, for monitoring in a reliable process

General notes about the series

Actuation: pneumatic, with filtered compressed air as per ISO 8573-1:2010 [7:4:4].

Operating principle: piston-actuated balls with integrated spring (to support the locked piston position)

Media transmission: variable via attachment feed-through modules, depending on the unit size

Housing: The housing consists of high-strength, hard-coated aluminum alloy. The functional components are made of hardened corrosion free steel.

Warranty: 24 months

Service life characteristics: on request

Harsh environmental conditions: Please note that use under harsh environmental conditions (e.g. in the coolant area, cast and grinding dust) can considerably reduce the service life of the units, and we will not take over any warranty. However, in many cases we can find a solution. Please contact us for assistance.

Minimum pressure: The minimum pressure is the required minimum pressure to lock the system. This pressure must be continuously present during operation.

Self-retaining: The automatic tool changer has a self-retaining feature that prevents the tool from falling off in case of the pressure drop. The change master and change adapter can be separated by pneumatically actuating the piston.

Technical drawings of the CPS-K and CPS-A components. The drawings include top, side, and front views. Key dimensions and features are labeled: 160mm width, 103.2mm height, 6x60° angles, Ø125, Ø11 (10x), Ø10/12 (2x), Ø10/20, M12/17.5 (8x), M10 (6x), Ø100 H7/8, Ø160, and various part numbers in circles (1, 2, 3, 5, 19, 24, 33, 91, 95, 96). The drawings are labeled CPS-K and CPS-A.

- ① Robot-side connection
- ② Tool-side connection
- ⑤ Through hole for connection with screws
- ⑱ Mounting surface for options
- ②④ Bolt circle
- ③③ DIN ISO-9409 bolt circle
- ⑨① Mounting surface A for control modules
- ⑨⑤ Fit for centering pins
- ⑨⑥ Fit for centering

Diagram illustrating the assembly components for the CTS-P system. The main structure is a vertical assembly consisting of a base plate, a central vertical beam, and a top mounting bracket. Various components are shown in exploded view, including: a base plate with four mounting holes; a central vertical beam with multiple connection points; a top mounting bracket with a central slot; a side mounting bracket with a central slot; a small rectangular component with a central slot; and a small rectangular component with a central slot.

CTS-P

Pneumatic control module

- 90 Mounting surface A for control modules
- 91 Distance plate
- 92 Pneumatic control module

An additional pneumatic control module is required on the CPS-K for locking and unlocking, which is available in different versions. The simple version includes 2 air connections for locking and unlocking, and a customer-side pneumatic valve is required. The other variant already includes a pneumatic valve in the module, which is connected to the piston chamber of the CPS-K and locks and unlocks the tool changer.

For detailed information and suitable cable connectors, see the "COS" chapter in the catalog, or visit schunk.com.

Optional modules COS

- 90 Pneumatic control module and spacer plate
- 91 Optional module COS

It is possible to screw additional COS option modules onto the pneumatic control module and the distance plate.

For detailed information and suitable cable connectors, see the "COS" chapter in the catalog, or visit schunk.com.

Adapter plate ISO-A160-R

- 1 Robot-side connection
- 2 Tool-side connection
- 33 DIN ISO-9409 bolt circle
- 95 Fit for centering pins
- 96 Fit for centering

Robot side adapter plate

Description	ID	
Adapter plate		
A-ISO160/CPS110-210	1581929	

Adapter plate for robots with M10 or M12 mounting patterns

Assembly situation of the locking monitoring

- ⑨⑩ Attachment kit for lock/unlock monitoring (bracket and sensor)

The drawing shows the installation situation with the prepared locking monitoring.

Description	ID	
Attachment kit for proximity switch		
AS-CPS-210	1620279	

- ① The K-S variants of the CPS-K already have lock monitoring integrated, so there is no need to order an additional attachment kit. The scope of delivery of each attachment kit contains one preset sensor with bracket, meaning that two attachment kits are required per CPS-K.
